

Tortoise Energy Fund (TNGY)

As of December 31, 2025

As a broad energy solution, TNGY is an actively managed ETF that seeks to deliver high base income with the potential for enhanced yield through energy-related fixed income and covered calls. The fund offers real asset exposure across the full energy value chain with an emphasis on natural gas, NGLs, and export infrastructure; sectors driving the next phase of global energy growth.

Investment Objective:

The Tortoise Energy Fund primarily seeks current income and secondarily seeks long-term capital appreciation.

The TNGY Advantage

Built for Income

TNGY targets higher income than traditional energy ETFs by investing in cash-generative energy businesses and enhancing yield with covered calls and energy-related fixed income.

Tax-Efficient Yield Delivery

Structured as a Regulated Investment Company (RIC), TNGY distributes income via a 1099 (no K-1s) and avoids the double taxation that affects C-Corp funds.

Real Asset Exposure with Inflation Alignment

By emphasizing investing in infrastructure with inflation-linked and fee-based cash flows, TNGY is more resilient than commodity-driven peers in both rising rate and risk-off environments.

Active Allocation Across Energy Value Chain

Unlike top-heavy or single subsector focuses, TNGY actively allocates across the entire energy value chain, with the ability to shift between equity and credit to capture opportunity and manage risk.

Positioned for What's Next

With a structural focus on natural gas, natural gas liquids (NGLs), and U.S. energy exports, TNGY is aligned with long-term global trends in energy reliability, security, electrification, and industrial reshoring, not just oil prices.

*Inception: 12/27/2010. The Tortoise Energy Fund ("TNGY") has assumed the performance history of Tortoise Energy Infrastructure and Income Fund ("INFI", or the "Predecessor Fund"). The Predecessor Fund and the ETF have certain differences; the ETF will have the ability to invest more broadly across the energy sector; may invest to a greater degree in debt securities; and will be non-diversified, so will generally invest a greater portion of its assets in the securities of one or more issuers and will invest overall in a smaller number of issuers than a diversified fund. Thus, the Predecessor Fund's past performance is not indicative of how the Fund will, or is expected to, perform in the future.

Past performance is no guarantee of future results. Current performance may be lower or higher than the performance data quoted. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than original cost. Returns less than one year are not annualized. NAV prices are used to calculate market price performance prior to the date when the fund first traded on the New York Stock Exchange. Market performance is determined using the bid/ask midpoint at 4:00pm Eastern time, when the NAV is typically calculated. Market performance does not represent the returns you would receive if you traded shares at other times. For the fund's most recent month end performance, please call (855) 994-4437.

As stated in the Prospectus, the total annual operating expenses are 0.85%.

Important Information

Tortoise Capital Advisors, LLC. (TCA) is the adviser to the Tortoise Energy Fund.

This fact sheet must be preceded or accompanied by the current prospectus. Click here for current prospectus.

The S&P 500® Index is an unmanaged, market-value weighted index of stocks that is widely regarded as the standard for measuring large-cap U.S. stock market performance. A master limited partnership (MLP) is a limited partnership investment vehicle that is traded on public exchanges. MLPs are traded in units rather than shares and consist of a general partner and limited partners. There are certain tax advantages as well as opportunity for more liquidity.

The fund's strategy of concentrating its assets in the power and energy infrastructure industries means that the performance of the fund will be closely tied to the performance of these particular market sectors.

Shares of exchange-traded funds (ETFs) are not individually redeemable and owners of the shares may acquire those shares from the ETF and tender those shares for redemption to the ETF in Creation Units only, see the ETF prospectus for additional information regarding Creation Units. Investors may purchase or sell ETF shares throughout the day through any brokerage account, which will result in typical brokerage commissions.

Investing involves risk. Principal loss is possible. The fund is registered as a non-diversified, open-end management investment company under the 1940 Act. Accordingly, there are no regulatory limits under the 1940 Act on the number or size of securities that we hold, and we may invest more assets in fewer issuers compared to a diversified fund. An investment in MLP securities involves some risks that differ from the risks involved in an investment in the common stock of a corporation, including risks relating to the ownership structure of MLPs, the risk that MLPs might lose their partnership status for tax purposes and the risk that MLPs will not make distributions to holders (including us) at anticipated levels or with the expected tax character.

We may invest a portion of our assets in fixed income securities rated "investment grade" by nationally recognized statistical rating organizations ("NRSROs") or judged by our investment adviser, Tortoise Capital Advisors, L.L.C. (the "Adviser"), to be of comparable credit quality. Non-investment grade securities are rated Ba1 or lower by Moody's, BB+ or lower by S&P or BB or lower by Fitch or, if unrated, are determined by our Adviser to be of comparable credit quality. Investments in the securities of non-U.S. issuers may involve risks not ordinarily associated with investments in securities and instruments of U.S. issuers, including different accounting, auditing and financial standards, less government supervision and regulation, additional tax withholding and taxes, difficulty enforcing rights in foreign countries, less publicly available information, difficulty effecting transactions, higher expenses, and exchange rate risk.

Restricted securities (including Rule 144A securities) are less liquid than freely tradable securities because of statutory and contractual restrictions on resale. This lack of liquidity creates special risks for us. Rule 144A provides an exemption from the registration requirements of the Securities Act of 1933 (the "1933 Act"), for the resale of certain restricted securities to qualified institutional buyers, such as the fund. We cannot guarantee that our covered call option strategy will be effective. There are several risks associated with transactions in options on securities. For example, the significant differences between the securities and options markets could result in an imperfect correlation between these markets. Certain securities may trade less frequently than those of larger companies that have larger market capitalizations.

There is no guarantee the fund will pay distributions in the future and distributions, if any, may be less than the current distribution.

Important Information

The Morningstar Rating™ for funds, or “star rating,” is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds and separate accounts) with at least a three-year history without adjustment for sales load. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product’s monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive five stars, the next 22.5% receive four stars, the next 35% receive three stars, the next 22.5% receive two stars, and the bottom 10% receive one star. The Overall Morningstar Rating™ for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating™ metrics. The weights are: 100% three-year rating for 36 - 59 months of total returns, 60% five-year rating/40% three-year rating for 60 - 119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. As of 12/31/2025, TNGY was rated against 66 Energy Equity Funds over the three-year period, 62 funds over the five-year period, and 57 over the 10-year period. TNGY received five stars for the three- and ten-year periods and three stars for the five-year period. Past performance is no guarantee of future results.
