

Tortoise Energy ETF (TNGY)

Our highest conviction investments across the energy value chain.

3Q 2026 QUARTERLY COMMENTARY

Market Backdrop

The broader energy sector gained 17.2% during the third quarter, based on the S&P Energy Select Sector Index, while midstream energy declined 2.8% and utilities fell 12.4%, as measured by the Alerian Midstream Energy Index and S&P Utility Select Sector Index, respectively.

Market performance was shaped by renewed geopolitical tensions between the United States and Iran, rising interest rates, and uncertainty surrounding electricity demand growth.

Despite the moderation in prices, geopolitical uncertainty remained elevated, reinforcing the strategic importance of the United States as a reliable global energy supplier. Within energy infrastructure, liquefied natural gas (LNG) exporters benefited from growing global demand, while refiners benefited from tight refined product supplies and elevated refining margins.

Midstream performance was pressured in part by growing opposition to data center development, raising concerns about the timing of electricity demand growth and associated natural gas infrastructure investment. Utilities faced additional headwinds from rising interest rates, which weighed on valuations given the sector's capital intensity and significant financing requirements.

Despite these pressures, the long-term electricity demand outlook remained constructive, supported by AI, data centers, and broader electrification. Across energy infrastructure, management teams maintained their focus on disciplined capital allocation, with acquisitions playing an increasingly prominent role. Investment priorities continued to emphasize high-return organic growth projects, sustainable dividend increases, opportunistic share repurchases, and balance sheet strength. Despite near-term market pressures, the underlying need for additional energy infrastructure remained substantial, supporting constructive long-term fundamentals.

Commodity Trends

Oil

The outlook for U.S. crude oil production growth improved as oil prices remained elevated. The U.S. Energy Information Administration (EIA) projects domestic production will increase from 13.6 million barrels per day (mmbpd) in 2025 to 13.9 mmbpd in 2026 and 14.3 mmbpd in 2027. The Permian Basin is expected to remain the primary driver of incremental supply, accounting for nearly half of total U.S. production.

West Texas Intermediate (WTI) crude oil began the quarter at \$70 per barrel, climbed to \$105 in mid-September as the conflict between the United States and Iran intensified, and retreated to \$90 by quarter-end as tanker traffic through the Strait of Hormuz began to recover. WTI averaged \$85 per barrel during the third quarter, approximately \$8 below the second-quarter average.

Tortoise Energy ETF (TNGY) received a Four-Star Overall Morningstar Rating™ among 62 Energy Equity Funds (based on a weighted average of the fund's three-, five-, and ten-year risk-adjusted return measure, if applicable) as of 9/30/2026.

Prices moderated as oil flows through the Strait of Hormuz increased and tensions between the U.S. and Iran eased. Nevertheless, conditions in the region remain far from normal, with continued uncertainty supporting a geopolitical risk premium in crude oil prices. Upstream producers continued to emphasize capital discipline despite higher spot crude oil prices, viewing the recent rally as driven primarily by geopolitical risk rather than a sustained improvement in long-term fundamentals.

Natural Gas

U.S. natural gas production is expected to expand steadily, increasing from 107.6 Bcf/d in 2025 to 112.2 Bcf/d in 2026 and 116.1 Bcf/d in 2027. Third-quarter natural gas prices averaged \$2.90 per MMBtu, largely unchanged from the second quarter.

While weather remains a primary driver of near-term price movements, the long-term demand outlook continues to strengthen. Continued contracting for U.S. LNG exports reinforces confidence in the next wave of export capacity and deepens the connection between domestic production and growing global demand.

Meanwhile, accelerating electricity consumption from AI, data centers, and broader electrification is increasing the need for reliable, dispatchable power generation, with natural gas positioned to supply a significant share of incremental demand. Together, these structural demand drivers are expected to require additional natural gas production and infrastructure investment, supporting a constructive long-term outlook for energy infrastructure.

Earnings, M&A and Project Developments

Upstream and Refining

Second-quarter earnings across the broader energy sector were generally better than expected, supported by higher commodity prices, strong operating execution, and continued improvements in drilling and completion efficiency.

Upstream producers benefited from stronger crude oil realizations as geopolitical tensions in the Middle East elevated prices and increased market volatility. Despite the more favorable pricing environment, management teams largely maintained their commitment to capital discipline, prioritizing free cash flow generation, shareholder returns, and balance sheet strength over accelerating drilling activity. Longer-dated crude oil prices providing insufficient incentive to materially expand capital spending. Continued improvements in well productivity, drilling efficiency, and cost management nevertheless supported resilient operating performance and modest production growth.

Refiners also benefited from favorable market conditions, as disruptions to global refining capacity and relatively tight supplies of gasoline and diesel supported stronger refining margins. Refinery outages, including disruptions associated with attacks on Russian energy infrastructure, contributed to tighter refined product markets and increased demand for U.S. exports. Higher utilization rates and disciplined operating costs further supported profitability, although results varied by company and regional market exposure.

Integrated energy companies benefited from stronger upstream realizations and refining margins, while continuing to emphasize portfolio optimization and operational efficiency.

Midstream Earnings and Organic Growth

Second-quarter earnings across the energy infrastructure sector were generally better than expected, with many companies raising full-year guidance or indicating performance was tracking ahead of initial expectations. Strong operating results reflected favorable natural gas market conditions, continued volume growth, and opportunities created by commodity price volatility.

Management teams also expressed growing confidence in the outlook for 2027, supported by expanding natural gas demand from LNG exports and power generation. Capital expenditure expectations continued to increase as companies announced new investment opportunities, including behind-the-meter power generation, natural gas processing facilities, and pipeline expansions designed to serve growing electricity demand from data centers and broader electrification.

Importantly, much of this incremental investment is supported by long-term contracts and multi-year construction schedules, providing visibility into future cash flows while preserving financial flexibility. Companies continued to balance investment in organic growth with shareholder returns and balance sheet discipline. Share repurchases totaled approximately \$800 million during the second quarter, bringing year-to-date buybacks to \$1.7 billion, reinforcing the industry's commitment to returning excess capital to shareholders.

M&A Activity

Midstream merger and acquisition (M&A) activity accelerated during the third quarter, with four significant transactions totaling approximately \$13 billion in announced value. The acquisitions were concentrated in natural gas gathering and processing and crude oil transportation assets across the Haynesville, Permian, and Rocky Mountain regions.

Notably, all four transactions involved publicly traded midstream companies acquiring complementary assets to expand their existing footprints, strengthen operating efficiencies, and enhance connectivity to key production basins and demand markets. The increase in activity highlights the industry's ongoing focus on disciplined capital allocation and the strategic value of consolidation, as midstream companies seek to capture operating synergies and position their businesses for long-term volume growth.

Power and Utilities

Second-quarter earnings across the power sector were generally favorable, with regulated utilities and independent power producers continuing to highlight a constructive long-term outlook supported by accelerating electricity demand.

Regulated utilities delivered steady earnings growth while expanding capital investment plans for transmission, distribution, and new generation capacity. Independent power producers benefited from healthy wholesale electricity markets, favorable contracting opportunities, and the increasing strategic value of existing dispatchable generation assets, particularly natural gas-fired and nuclear power plants.

The central theme across earnings season remained the growing demand for electricity from AI, data centers, electrification, and domestic manufacturing. Management teams highlighted continued progress in converting customer inquiries into long-term power supply agreements and infrastructure development commitments, providing greater visibility into future demand growth.

At the same time, growing concerns around electricity affordability, permitting delays, and community opposition to data center development introduced greater scrutiny of the pace and timing of new electricity demand. While these challenges could delay individual projects, the underlying need for reliable power generation and supporting infrastructure remains substantial.

Companies across the sector continued to emphasize disciplined capital allocation, with regulated utilities expanding long-term investment plans to support rate base growth and independent power producers pursuing attractive generation investments, long-term contracting opportunities, and shareholder returns.

Collectively, second-quarter results reinforced the favorable long-term fundamentals for North American power infrastructure, while highlighting the importance of disciplined investment and execution as the industry works to meet a rapidly evolving electricity demand outlook.

Portfolio Positioning

The Fund invests across the energy value chain, emphasizing companies with growing free cash flow, strong balance sheets, and disciplined capital allocation. We favor businesses committed to returning capital through sustainable dividend growth and opportunistic share repurchases.

Within upstream, we prioritize low-cost producers with high-quality inventories and efficient operations. In midstream, we emphasize pipelines and export infrastructure supporting LNG, LPG, crude oil, and natural gas, positioning the portfolio to benefit from growing global demand for U.S. energy.

Our refining exposure is concentrated in Gulf Coast operators with advantaged access to export markets. We also invest in companies positioned to benefit from rising electricity demand driven by AI, data centers, and electrification, particularly where increased power needs support long-term natural gas consumption.

Geographically, the portfolio maintains significant exposure to the Permian and Marcellus basins, which we believe are among the most competitive and strategically important regions for long-term U.S. oil and natural gas production.

*Inception: 12/27/2010. The Tortoise Energy ETF ("TNGY") has assumed the performance history of Tortoise Energy Infrastructure and Income Fund ("INFIX;" or the "Predecessor Fund"). The Predecessor Fund and the ETF have certain differences; the ETF will have the ability to invest more broadly across the energy sector; may invest to a greater degree in debt securities; and will be non-diversified, so will generally invest a greater portion of its assets in the securities of one or more issuers and will invest overall in a smaller number of issuers than a diversified fund. Thus, the Predecessor Fund's past performance is not indicative of how the Fund will, or is expected to, perform in the future.

The performance data quoted represents past performance. Past performance is no guarantee of future results. Current performance may be lower or higher than the performance data quoted. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than original cost. Performance data current to the most recent month-end may be obtained by visiting <https://tortoisecapital.com/etf/tortoise-energy-fund/#performance>. Returns less than one year are not annualized. NAV prices are used to calculate market price performance prior to the date when the fund first traded on the New York Stock Exchange. Market performance is determined using the bid/ask midpoint at 4:00pm Eastern time, when the NAV is typically calculated. Market performance does not represent the returns you would receive if you traded shares at other times. For the fund's most recent month end performance, please call (855) 994-4437.

As stated in the Prospectus, the total annual operating expenses are 0.85%.

Disclosures

Tortoise Capital Advisors, LLC. (TCA) is the adviser to the Tortoise Energy ETF.

The fund's investment objective, risks, charges and expenses must be considered carefully before investing. Read it carefully before investing.

The S&P 500® Total Return Index is a total return index that reflects both changes in the prices of stocks in the S&P 500® Index as well as the reinvestment of the dividend income from its underlying stocks. The S&P Energy Select Sector® Index is a modified market capitalization-based index of S&P 500® companies in the energy sector that develop and produce crude oil and natural gas and provide drilling and other energy related services. Returns include reinvested dividends. The Alerian Midstream Energy Index is a broad-based composite of North American energy infrastructure companies. The capped, float-adjusted, capitalization-weighted index, whose constituents earn the majority of their cash flow from midstream activities involving energy commodities, is disseminated real-time on a price-return basis (AMNA) and on a total-return basis (AMNAX). The S&P Utilities Select Sector Index is a modified capitalization-weighted index. The Index is intended to track the movements of companies that are constituents of the S&P 500® in the utility sector (as defined by the Global Industry Classification Standard). A master limited partnership (MLP) is a limited partnership investment vehicle that is traded on public exchanges. MLPs are traded in units rather than shares and consist of a general partner and limited partners. There are certain tax advantages as well as opportunity for more liquidity. Free cash flow is the cash a company produces through its operations, less the cost of total capital expenditures (growth and maintenance).

The fund's strategy of concentrating its assets in the power and energy infrastructure industries means that the performance of the fund will be closely tied to the performance of these particular market sectors.

Shares of exchange-traded funds (ETFs) are not individually redeemable and owners of the shares may acquire those shares from the ETF and tender those shares for redemption to the ETF in Creation Units only, see the ETF prospectus for additional information regarding Creation Units. Investors may purchase or sell ETF shares throughout the day through any brokerage account, which will result in typical brokerage commissions.

Investing involves risk. Principal loss is possible. The fund is registered as a non-diversified, open-end management investment company under the 1940 Act. Accordingly, there are no regulatory limits under the 1940 Act on the number or size of securities that we hold, and we may invest more assets in fewer issuers compared to a diversified fund. An investment in MLP securities involves some risks that differ from the risks involved in an investment in the common stock of a corporation, including risks relating to the ownership structure of MLPs, the risk that MLPs might lose their partnership status for tax purposes and the risk that MLPs will not make distributions to holders (including us) at anticipated levels or with the expected tax character.

We may invest a portion of our assets in fixed income securities rated "investment grade" by nationally recognized statistical rating organizations ("NRSROs") or judged by our investment adviser, Tortoise Capital Advisors, L.L.C. (the "Adviser"), to be of comparable credit quality. Non-investment grade securities are rated Ba1 or lower by Moody's, BB+ or lower by S&P or BB or lower by Fitch or, if unrated, are determined by our Adviser to be of comparable credit quality. Investments in the securities of non-U.S. issuers may involve risks not ordinarily associated with investments in securities and instruments of U.S. issuers, including different accounting, auditing and financial standards, less government supervision and regulation, additional tax withholding and taxes, difficulty enforcing rights in foreign countries, less publicly available information, difficulty effecting transactions, higher expenses, and exchange rate risk.

Restricted securities (including Rule 144A securities) are less liquid than freely tradable securities because of statutory and contractual restrictions on resale. This lack of liquidity creates special risks for us. Rule 144A provides an exemption from the registration requirements of the Securities Act of 1933 (the "1933 Act"), for the resale of certain restricted securities to qualified institutional buyers, such as the fund. We cannot guarantee that our covered call option strategy will be effective. There are several risks associated with transactions in options on securities. For example, the significant differences between the securities and options markets could result in an imperfect correlation between these markets. Certain securities may trade less frequently than those of larger companies that have larger market capitalizations.

There is no guarantee the fund will pay distributions in the future and distributions, if any, may be less than the current distribution.

The information contained herein: (1) is proprietary to Morningstar; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information.

The Morningstar Rating™ for funds, or “star rating,” is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds and separate accounts) with at least a three-year history without adjustment for sales load. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive five stars, the next 22.5% receive four stars, the next 35% receive three stars, the next 22.5% receive two stars, and the bottom 10% receive one star. The Overall Morningstar Rating™ for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating™ metrics. The weights are: 100% three-year rating for 36 - 59 months of total returns, 60% five-year rating/40% three-year rating for 60 - 119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. As of 9/30/2026, TNGY was rated against 62 Energy Equity Funds over the three-year period, 57 funds over the five-year period, and 55 over the 10-year period. TNGY received four stars for the three-year period, three stars for the five-year period and four stars for the ten-year period. Past performance is no guarantee of future results.
